1. Introduction

The Information Technology (IT) Department at SentinelAI Technologies Pvt. Ltd. is responsible for providing technical support, maintaining enterprise infrastructure, managing employee devices, ensuring cybersecurity compliance, and supporting all software and hardware used across the organization.

This guide serves as the primary reference for employees seeking assistance with company-issued devices, enterprise software, network connectivity, email services, VPN access, printers, and general IT-related issues.

Employees are encouraged to consult this guide before raising a support request, as many commonly encountered problems can be resolved using the procedures documented here.

2. Purpose

The objective of this document is to establish standardized IT support procedures across the organization.

This guide aims to:

- Improve response time for common technical issues.
- Ensure consistent troubleshooting practices.
- Reduce system downtime.
- Promote secure computing practices.
- Protect organizational information assets.
- Provide employees with self-service guidance whenever possible.

Following these procedures helps maintain a secure and efficient technology environment while reducing operational disruptions.

3. Scope

This document applies to:

- Full-time employees
- Contract employees
- Interns

- Consultants with company-issued devices

The guide covers support for:

- Windows laptops
- macOS laptops
- Company email accounts
- Internal applications
- Enterprise collaboration platforms
- VPN connectivity
- Printers
- Corporate Wi-Fi
- Video conferencing tools

This guide does not cover personal devices unless they have been explicitly approved under the organization's Bring Your Own Device (BYOD) policy.

4. IT Help Desk Services

The IT Help Desk provides technical assistance for issues related to hardware, software, enterprise applications, and network connectivity.

Employees may contact the IT Help Desk for assistance with:

- Laptop startup failures
- Slow system performance
- Software installation requests
- Printer configuration
- Network connectivity problems
- Email access issues
- Password resets
- Multi-factor authentication problems
- VPN connectivity

- Hardware replacement requests

Support requests should include:

- Employee ID
- Department
- Device name (if known)
- Description of the issue
- Screenshots or error messages when available

Providing detailed information enables faster diagnosis and resolution.

5. Password Management Policy

Strong passwords are essential for protecting company systems and sensitive information.

Passwords must satisfy the following requirements:

- Minimum length of 12 characters
- At least one uppercase letter
- At least one lowercase letter
- At least one numerical digit
- At least one special character

Employees should avoid using:

- Personal names
- Birth dates
- Phone numbers
- Dictionary words
- Common keyboard patterns

Passwords must never be:

- Shared with colleagues
- Written on paper near workstations

- Stored in unsecured text files
- Sent through email or chat applications

Employees are encouraged to use approved password management software to securely store credentials.

Passwords should be updated every 90 days or immediately if compromise is suspected.

6. Software Installation Guidelines

Only software approved by the IT Department may be installed on company devices.

Employees requiring additional software should submit a request through the IT Service Portal.

The request should include:

- Software name
- Vendor
- Business justification
- Required version
- Project or department requesting access

The IT Department evaluates software for:

- Licensing compliance
- Security vulnerabilities
- Compatibility
- Performance impact
- Maintenance requirements

Unauthorized software installations may be removed without prior notice to maintain system integrity and compliance.

7. Company Laptop Usage Policy

Each employee is issued a company-managed laptop configured with enterprise security policies.

Employees are expected to:

- Lock their device when leaving their workstation.
- Keep the operating system updated.
- Avoid disabling antivirus software.
- Store work-related files only in approved locations.
- Report lost or stolen devices immediately.
- Avoid connecting unknown USB storage devices.

Company laptops are intended primarily for business purposes. Limited personal use is permitted provided it does not interfere with work responsibilities or violate company policies.

8. VPN Access Guidelines

Employees working remotely must use the approved corporate VPN to securely access internal resources.

Before connecting:

- Verify internet connectivity.
- Launch the approved VPN client.
- Authenticate using corporate credentials.
- Complete multi-factor authentication when prompted.

Employees should avoid connecting through unsecured public Wi-Fi networks whenever possible.

If public Wi-Fi must be used, ensure the VPN connection is established before accessing company resources.

Disconnect the VPN after work is completed to minimize unnecessary network exposure.

9. Email and Communication Security

Company email is intended exclusively for business communication.

Employees should:

- Verify recipients before sending emails.
- Avoid forwarding confidential information without authorization.
- Be cautious when opening attachments from unknown senders.
- Report suspicious emails immediately.

Common phishing indicators include:

- Unexpected attachments
- Requests for passwords
- Urgent financial requests
- Poor grammar
- Unknown sender addresses
- Suspicious links

Employees should never provide login credentials through email.

10. Internet Usage Policy

Internet access is provided to support business activities.

Employees should avoid:

- Downloading unauthorized software
- Visiting malicious or suspicious websites
- Streaming excessive media during working hours
- Accessing illegal or inappropriate content

Web browsing activity may be monitored to ensure compliance with organizational security policies.

11. Hardware Troubleshooting

If a laptop experiences performance issues, employees should perform the following checks before contacting IT:

- Restart the computer.
- Verify available disk space.
- Install pending operating system updates.
- Disconnect unnecessary USB devices.
- Check battery health.
- Verify internet connectivity.

If problems persist after these steps, create a support ticket with detailed information.

12. Printer and Peripheral Support

Employees experiencing printer issues should verify:

- Printer power status
- Network connectivity
- Paper availability
- Toner levels
- Correct printer selection

Peripheral devices such as keyboards, mice, webcams, and monitors should be connected using approved hardware and drivers.

13. Cybersecurity Best Practices

Employees play a critical role in maintaining organizational security.

Recommended practices include:

- Enable screen lock when away from the desk.
- Use multi-factor authentication where available.
- Regularly update passwords.
- Avoid sharing confidential information through unauthorized channels.

- Verify website authenticity before entering credentials.
- Report unusual system behavior immediately.

Cybersecurity awareness training is conducted periodically and employees are expected to participate.

14. Reporting Security Incidents

Employees should immediately report:

- Lost laptops
- Stolen devices
- Malware infections
- Suspicious emails
- Unauthorized account access
- Data loss incidents
- Accidental disclosure of company information

Prompt reporting enables faster containment and minimizes operational impact.

15. Frequently Asked Questions

How do I reset my password?

Submit a password reset request through the IT Service Portal after completing identity verification.

Can I install development software?

Yes, provided it has been approved through the software request process.

Who should I contact if my laptop is damaged?

Raise a hardware support ticket through the IT Help Desk.

Can I use my personal email for company work?

No. Employees must use their official company email for all business communication.

What should I do if I receive a suspicious email?

Do not open attachments or click links. Report the email immediately to the IT Help Desk.
